

## Escutcheons Flexible Floor & Ceiling Plate Installation

### Installation

The plastic floor&ceiling plates may be installed by two methods. The first is by placing the floor&ceiling plate over the pipe while the pipe is being installed.

The second is by splitting the floor&ceiling plate at the area on the back of the floor&ceiling plates that has been molded to break apart until fully separated.

Then twist the floor&ceiling plate open just enough to be placed around the pipe. Allow the two ends of the separated floor&ceiling plate to “spring” back into shape.

Slide the floor&ceiling plate up against the base material to finish the installation.

### Warning

The wall plates should not be painted. Certain chemicals contained in paint may cause the wall plates to deteriorate.
