

WAX BOWL RING WITH POLYETHYLENE SLEEVE

GENERAL INFORMATION:

Oatey Wax Bowl Ring gaskets have flanged polyethylene sleeves permanently molded into a blend of preformed amber petrolatum wax. Wax bowl rings are wrapped in handy ready-to-use packages for clean, efficient handling and a positive seal.

INSTALLATION:

Wax bowl ring must be at least 70 degrees Fahrenheit to insure proper flow of wax. All surfaces must be dry and free from hardened putty, loose scale and contaminated wax. Remove debris by scraping or wire brushing, then dust and dry all surfaces before installing gasket. Press gasket over horn of outlet on toilet bowl and set in place over closet bolts and use body weight to compress gasket. Twist bowl slightly to spread wax then tighten flange bolts carefully to prevent breaking bowl. Polyethylene sleeve will help guide bowl outlet in line with floor flange.

RESTRICTIONS AND CAUTIONS:

For use on floor closet bowls only. **DO NOT INSTALL ON WET SURFACE.** Keep away from direct sunlight to prevent darkening wax. Do not store near extreme heat. Please refer to our Material Safety Data Sheet for more information.
