Electra-Valve II Wall Inlet White

[Installation Guide](#)[Tools & Resources](#)[Product Catalogs](#)[Where to Buy](#)[Shop for Parts](#)[Print](#)[Overview](#)[Specifications](#)[Reviews](#)[Answers](#)

The Electra-Valve® II Electrified inlet includes a built-in low-voltage terminal so direct-connect hoses plug right in – alleviating the need for a power cord. The molded power receptacle clips to a mounting plate and housing wire is run to the nearest outlet box.

- Electrified inlets provide you with a simple one-step operation to plug in a Current-Carrying hose, eliminating the need to plug an additional cord into an electrical outlet to power an electric brush
- System turns on automatically when an un-switched hose is inserted or is ready for immediate activation when inserting a switched hose which means you can begin vacuuming right away
- Requires CI399RK rough-in kit for proper installation; UL approved for your confidence; use with NuTone CH615 central cleaning system hoses
