Description

Regulator heater kits are designed for Kohler® 20 kW residential/light commercial generator sets. The regulator heater kit is recommended for reliable engine starting in temperatures from -18°C to -29°C (0°F to -20°F).

The regulator heater is a 127 mm (5 in.) diameter round heating pad with a snap action thermostat and a power cord. The heating pad mounts directly on the fuel regulator, which is located on the air intake side of the generator set.

Fuel regulator heater kits are available in 120 volt or 240 volt versions.

Note: The heater requires a continuous source of AC power. The generator set must be connected to an AC power source that is backed up by the generator set.

Kit Contents

Models: 20RES/RESL/RESA/RESAL/RESB		
Kit	GM79141-KP1-QS	GM79141-KP2-QS
