VITOCONNECT OPTO2 VICARE APP

Vitoconnect OPTO2 with connections for the power supply adaptor and data connection via USB.

Stay WiFi connected, comfortable and in control with Vitoconnect

The ViCare app and WiFi-ready Vitoconnect are designed to save time, money and energy with remote Internet connectivity and automatic operation. ViCare and Vitoconnect allow smartphone and tablet users to easily monitor and program their Viessmann boiler and stay in control anytime, anywhere via the Internet.

Through simple programming with the ViCare app, users automatically save money on their heating costs and can see their savings in real time.

Automatically Save Energy

The system is designed to control and regulate your heating circuits. Swipe to the right or left to set the desired room temperature. With a simple touch you can change between "Normal" and "Party" mode, which extends the normal heating time program.

When leaving the house ("Away"), lower the temperature so you can save energy and money with a single click. You can select different operating times for each day through the "Heating Schedule" feature to customize your heating system to your specific preferences.

A separate button on the home screen gives plenty of energy saving tips.

System status at a glance

You can easily see if your heating operation is performing as intended. A yellow screen indicates maintenance is required. If the screen is red, your heating contractor's contact information will be displayed so you can conveniently connect with them.

WiFi Module Vitoconnect OPTO2

The Wifi Vitoconnect module is connected directly to the Vitotronic control console. At only 4 inches in size the adapter is designed to be easily wall mounted.

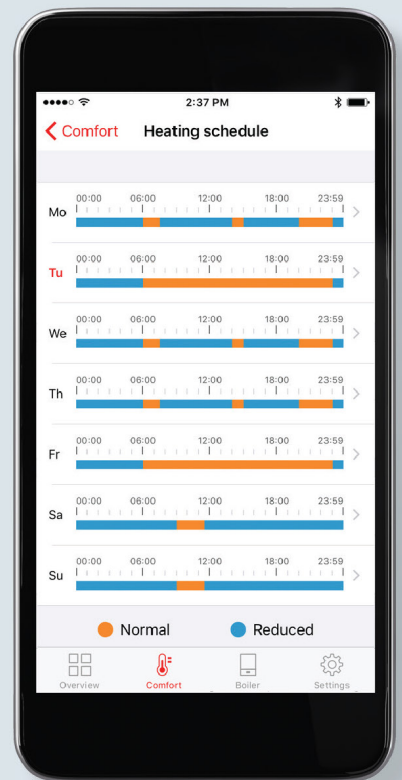

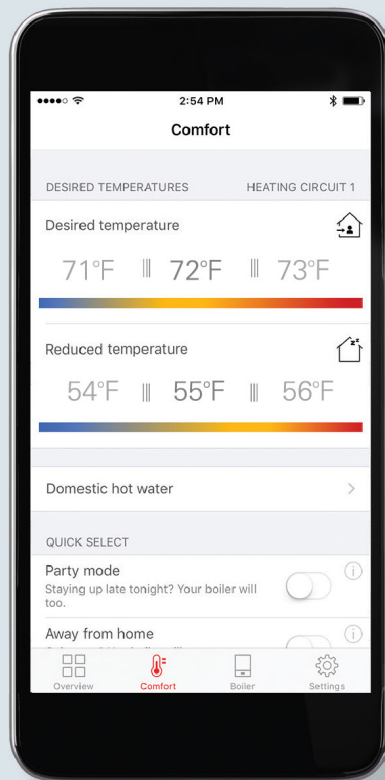

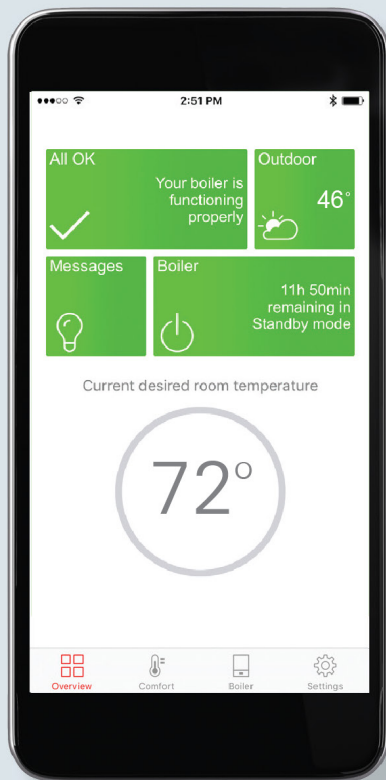

The module is connected to your wireless router and registered via a simple plug and play process. To connect the module to your ViCare smartphone application, simply scan the QR code included with the module. Vitoconnect is compatible with iOS and Android phones or tablets, and is available for free from the Apple® App Store and Google® Play.

ViCare compatibility with Viessmann boilers

The Vitoconnect OPTO2 module is available for purchase as an accessory feature for all Vitodens 200, Vitodens 222, and Vitocrossal 300 CU3A gas condensing boilers. The module is compatible with Viessmann wall-hung, compact units and floor standing boilers with Vitotronic 300 and 300 controls.
